
About

I bridge the gap between user needs and technical viability, focusing on delivering measurable product outcomes rather than rigid roadmaps. By deeply analysing the problem space and leveraging key data, I ensure that product features fulfil their true purpose and deliver value before a single line of code is built. My background in service design, UI/UX, and full-stack development allows me to lead cross-functional teams in translating complex business requirements into accessible, user-centred products that drive significant societal and organisational impact.

Experience

100Green (UK) Communications Manager

April 2025 - Present

- Owned the product lifecycle for the energy quote journey, aligning business objectives with user needs. Prioritised the product roadmap based on data analysis and usability criteria, resulting in a +19% uplift in customer sign-ups (May-June 2026).
- Managed stakeholder relationships to evaluate and select third-party software, balancing technical debt with the need for rapid feature delivery.
- Developed comprehensive wireframes, high-fidelity prototypes, and frontend builds utilising Figma to bridge the gap between design concepts and technical deployment.
- Led strategic consultations with upper management and key stakeholders to evaluate, select, and implement third-party software solutions, driving business process optimisation and CRM integration.
- Upskilled existing colleagues on automated workflows (Power Automate) and AI integration. Leveraged prior industry experience to train the team on Google Analytics, SEO and data modelling, resulting in the creation of highly interactive, user-focused business dashboards and customer-facing products.
- Managed monthly energy price updates, ensuring a high accuracy of data and accessibility across all touchpoints, including email, website, mobile app, industry RFIs, etc.
- Analysed historical consumption trends to implement data-driven pricing adjustments, maximising contract renewals and overall customer retention.
- Managed and maintained the WordPress CMS, developing custom PHP and JavaScript scripts to resolve technical blockers and enhance the platform's core functionality.
- Built interactive React components for the energy quote journey, bridging the gap between technical requirements and user-centred design.
- Evaluated user behaviour using Microsoft Clarity, Google Tag Manager and Data Studio, translating usability audits into actionable functionality improvements.
- Ran continuous A/B testing across website and email touchpoints to personalise content, while ensuring strict compliance with complex Ofgem regulatory obligations.

ITS (UK) Frontend Developer

Jun 2021 - April 2024

- Acted as a product leader within an Agile delivery team. Partnered with stakeholders to translate business requirements into a prioritized product backlog, driving a 37.5% increase in conversion rates through iterative feature releases and regular sprints.
- Built scalable React components and data schemas to deliver cohesive user experiences across internal product pages (PLPs/PDPs) and external touchpoints, including Google Shopping and social media.
- Architected a new email marketing framework integrating third-party tools (Klaviyo, Dotdigital, Fresh Relevance). Utilised automated database flows and advanced personalisation engines to elevate the business value of our products, services and industry-facing educational content.

- Held cross-functional teams accountable for high-quality service deliverables by establishing strict end-to-end testing protocols — personally writing and implementing automated E2E tests via Playwright and Cypress.
- Optimised platform performance and core web vitals through systematic code refactoring and state management, directly improving page load speeds and service accessibility.
- Collaborated closely with product owners and stakeholders to translate complex business requirements into scalable, user-tested frontend architectures.
- Integrated structured data schemas (e.g., JSON-LD) at the root architectural level, unifying technical SEO deployment across multiple frontend features and services.

ITS (UK) Designer

Jul 2019 - Jun 2021

- Played a key role in the strategic technical migration of the legacy CMS to BigCommerce, streamlining design processes and implementing cohesive design templates across various marketing channels.
- Analysed engagement metrics to identify user needs, translating data into continuous system recommendations and automated, highly personalised touchpoints.
- Optimised internal marketing operations by establishing data-driven design templates, improving the efficiency and output quality of the wider marketing, design and development teams.

Freelance Designer & Developer

Jul 2019 - Present

- Designed, developed, and deployed custom web applications from the ground up, leveraging advanced AI workflows and automated CI/CD pipelining to streamline complex back-end database processes.
- Actively contributed to several open-source projects on GitHub, collaborating with the wider developer community to improve codebase maintainability and integrate new features in standalone apps.
- Partnered with a diverse range of clients to understand their strategic ambitions, conducting initial research and market analysis to define clear, actionable project scopes.
- Managed the end-to-end delivery of digital products, mapping user journeys and developing prototypes in Figma before building robust, custom frontend solutions.
- Acted as a technical consultant, evaluating client needs and implementing bespoke software that enhanced their operational capabilities and business offering.

Education

Google UX Design

Google | 2024

Bachelor's Degree, Graphic Communication

NUA | 2016-2019

BTEC Extended Diploma, Graphic Design

Harlow College | 2014-2016

Interests

Taking a career break in landscaping with Phipps Group provided a valuable reset. Managed large-scale physical projects from stakeholder brief to delivery. This gave me more experience with logistical constraints, external vendors, and ensuring project delivery remained aligned with the customers expectations — skills I now apply to managing digital product delivery.

In my downtime, I recharge by coding, gaming, making music, and practising Muay Thai.

Key Skills

Product Management (Confident), UX Strategy (Advanced), Stakeholder Management (Advanced), Agile Methodologies (Advanced), Data Analysis & Analytics (Confident), User-Centred Design (UCD) (Advanced), User Journey Mapping (Advanced), Service Blueprinting (Advanced), User Research & Usability Testing (Confident), Figma & Prototyping (Advanced), System Architecture (Confident), Front-End Development (React.js) (Confident), Accessibility / WCAG (Confident)
